«Ronda » «Gaither» Earns Cardiovascular Medicine Certification

(ALISO VIEJO, California) May 9, 2006 – «Ronda D. Gaither, RN, CCRN-CMC» recently achieved subspecialty board certification in cardiovascular medicine, CMC™, after successfully completing the nationally recognized examination, announced the AACN Certification Corporation. Cardiovascular Medicine Certified nurses work in areas such as Coronary Care Units, Progressive Care, Heart Failure Clinics, Cardiac Rehabilitation Units, Cardiac Catheterization Labs or Electrophysiology Units.

The importance of clinical certification to the health and well-being of patients in the United States has been well documented. Research studies have linked certification to higher levels of clinical knowledge, experience and skill. These studies have indicated that certified nurses were particularly motivated to maintain clinical excellence even in rapidly changing critical care environments. Further, the studies found that the achievement of certification demonstrated commitment on the part of the individual to patients, families, employers and colleagues alike.

The AACN Certification Corporation provides comprehensive credentialing for nurses to ensure their practice is consistent with established standards of excellence in caring for acutely and critically ill patients and their families.
